**** Uses of mixing powders ****

Iron Oxides- Coloring for makeup, soaps or toiletries. Inorganic mineral.

Zinc Oxide- Has skin soothing properties, often used in baby products, and makeup. When combined with titanium dioxide at a rate of 6% provides sunblock protection. Is a fine white powder.

Sericite- Used sometimes as base for makeup, provides some skin adhesion. Is a fine off white powder.

Amorphous Silica- Provides a smooth feel to the makeup, aids in reducing uneven skin lines, helps to fill small pocks or wrinkles. Can be tinted with makeup base minerals.

Titanium Dioxide- White appearing matte powder. Used for making things white, used in soap, sometimes cosmetics. Can be combined with zinc oxide to provide sun protection.

Makeup base- The combination of several ingredients, provides smooth feeling makeup..all you need to do is grind in your iron oxides to make your own colors.

Boron Nitride- Provides a smooth silky feel to the mineral makeup, also is great in providing skin adhesion for the mineral makeup. Is white, matte, appearing.

Sheer Cover minerals- Is used primarily to provide oil absorption to the oily T zone of the face. Also gives a finishing look to the skin. Can be used as an all over face cover.

Kaolin Clay- Natural mined clay found in the USA. Holds great amounts of oil and water, often used in preparations for oily zones of the face. Helps dry skin.
